| Team ID | NM2023TMID01199 |
| Project Name | Smart billing system for water suppliers |

Project Demonstration:

A project demonstration is a presentation or showcase of a project's features, functionality, and benefits to an audience. It typically involves showcasing the project's key components, technologies, and capabilities in action, either through a live demonstration or a pre-recorded video.

The purpose of a project demonstration is to provide stakeholders, potential users, or investors with a clear understanding of the project's goals, progress, and potential impact. It allows the audience to see how the project works, its key features, and how it addresses specific needs or challenges.

In the case of a smart billing system for water suppliers, a project demonstration video could include visual representations or simulations of the system's user interface, data collection processes, automation capabilities, and any other important aspects that make the system unique or beneficial. The video aims to provide an engaging and informative overview of the project's functionalities and advantages to the viewers

We attached our project demonstration video. Here's a link

In Conclusion, This adoption of a Smart Billing System is a significant step towards a more efficient, transparent, and environmentally conscious water supply industry.

Thank You ..!
